

Sprite, Midget, MGA EXTERIOR DOOR HANDLES

SPEEDWELL

ACCESSORIES

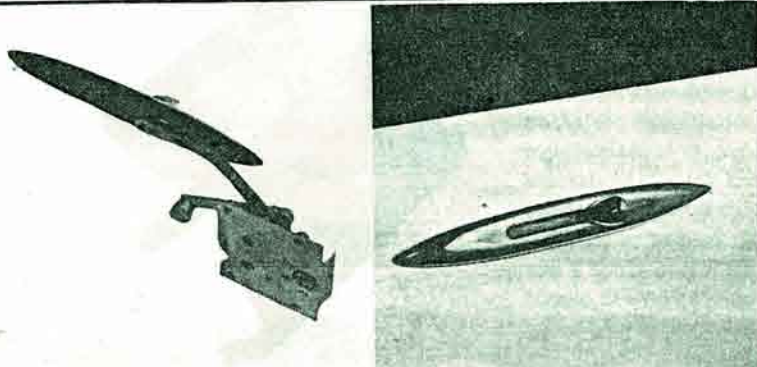

A beautiful accessory created by Speedwell's Technical Director, Dave Jones, these sliding door handles at last eliminate the "reach inside and fumble" method of door opening.

The assembly consists of a streamlined body incorporating a simple sliding mechanism. The slide knob is connected to the original door lock via a short link. Fitting entails cutting a small slot in the door panel and drilling a few small holes. A rubber gasket ensures a waterproof seal.

Suitable for Sprite I and II, MG Midgets and MGA.

Specification: Pressure die-casting heavily chromed and polished; brass stud inserts. Supplied complete in attractive display pack with full instructions.
