

Sprite and Midget HARDTOPS

SPEEDWELL

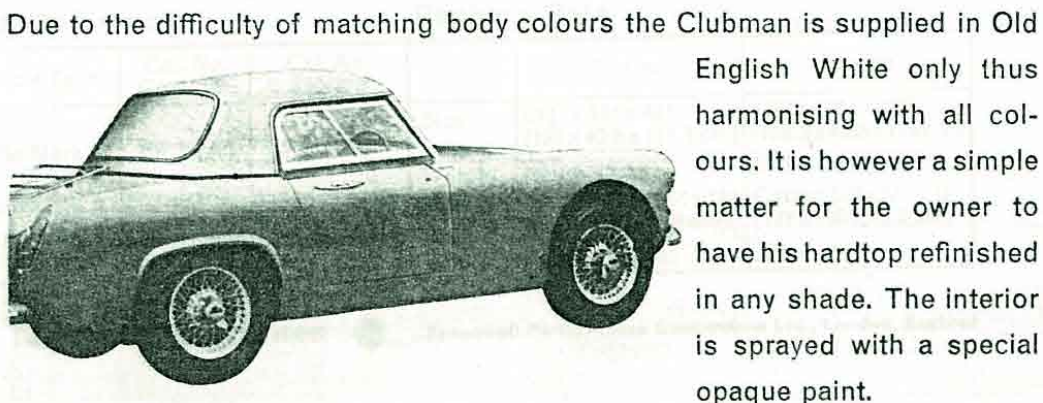

CHASSIS and BODY PARTS

CLUBMAN HARDTOP

For the first time a hardtop with style and definite lines. The Speedwell Clubman has been designed to suit both the shape and distinct appearance of the Mark II Sprite and Midget as well as the rounder contours of the Mark I model with standard body work or with the Speedwell "Monza" bonnet. The simplicity of line gives a low and sleek appearance yet ensures adequate headroom for the tall driver.

Manufactured in Polyester fibre, with sponge rubber sealing edges, the Clubman hardtop requires no drilling or any other modification to the car body. It is secured by two hooks through the rear hood stay brackets and a dual purpose full width polished alloy retaining clip giving the body a distinctive appearance and good water sealing properties. The large rear window is made of unbreakable Acrylic ensuring good rear visibility and a light interior. The snug fit of the original sliding side screens complete perfect all-round weather proofing.

Due to the difficulty of matching body colours the Clubman is supplied in Old English White only thus harmonising with all colours. It is however a simple matter for the owner to have his hardtop refinished in any shade. The interior is sprayed with a special opaque paint.
